

Building a Mathematics Education Community in an Urban Elementary School: Challenges and Triumphs.

Wednesday, March 22nd
12-1pm
G-23 Aderhold Hall

Presenter: Dorothy White, Mathematics & Science Education

Building a mathematics education community requires the time and commitment of teachers, paraprofessionals, administrators, university educators/partners, and students. Project SIPS (Support and Ideas for Planning and Sharing in Mathematics Education) was a three-year school-based professional development project designed to help teachers improve the quality of their mathematics instruction by building a mathematics education community within their school. In this presentation Dr. White will share some of the challenges and triumphs in implementing and sustaining such an initiative with particular attention to the needs of diverse student learners.

Sponsored by COE Dean's Council on Diversity & CLASE

Light refreshments will be served
