

Teaching Methods

1. Bring the science to everyday life.
2. Value student's opinions, engage students in questions and opinion about the subject taught that day.
3. Be part of the class, walk thru the class.....,don't need to be in the stage to teach.
4. Be available to them before and after the class.
5. Use powerpoint presentations and fill the blank handouts, so have more time to listen.

I believe in the "Listen to me now, think about later."
